Farm and Estate Mapping

Pear Technology specialise in providing digital mapping systems and services for the rural estate, forestry and farming industries, from small farms to some of the country's largest land holdings. More than just software suppliers, we provide a complete service that includes on-going support to help you get the most out of your system.

Pear Technology's digital mapping system enables you to visualize a single building or a whole estate on the computer screen and print on any size of paper at any scale.

Key information often held by just one or two individuals can be easily added to a map. Communications to staff, contractors, advisers and visitors are more easily achieved.

Pear Technology's software does these tasks in a relatively easy to use and affordable way, bringing their benefits within reach of those involved in land management, regardless of computer skills.

By providing a complete map preparation service followed by installation, training and excellent after-sales support, we try to make the whole process of moving to a digital mapping system as painless and as productive as possible.

A Complete Service

» Software designed specifically for rural land management applications.

» Open system - can talk to other mapping systems, so you are not tied to Pear.

» Set up for easy use of hand-held GPS devices for site survey work.

» Maps based on latest OS MasterMap data.

» Significant cost savings over "pay as you go".

» Maps supplied ready for use so minimal pain and maximum productivity.

» The same base maps are used by all Government agencies, so area measurements are consistent.

» Any combination of OS, aerial imagery, CAD drawings and GPS boundaries can be used.

» Maps can be linked to third party software.

» Easy to use—half-day's training is usually sufficient to get started.

» Optional support agreement gives unlimited help and free software updates.
