

Land Registry Title Boundaries

Land Registry data is now available in a digital mapping format.

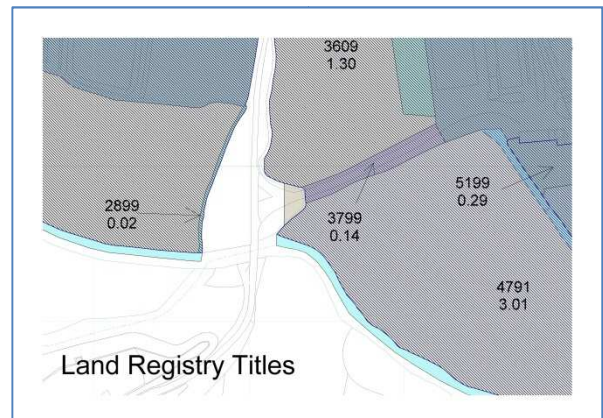

Simply request your Land Registry titles from Pear Technology and receive them as a new layer in PT-Mapper. Each title is shown as an individual polygon with its own title number as an ID.

This invaluable tool allows you to quickly identify what land is registered, what is not and what should be by comparing the title boundaries against your current map data such as an estate boundary.

Use PTM-Pro with the OS MasterMap Topography Layer to produce Land Registry compliant plans to correct any discrepancies.

Uses

- » Identify queries and anomalies against Estate Boundary
- » Verify land ownership against OS MasterMap data, such as rivers and boundaries
- » Identify exact ownership areas and features
- » Create maps of separate Land Registry titles.

Process to obtain Land Registry data

1. Submit your list of Land Registry titles to Pear Technology as an excel spreadsheet.
2. This data shall be sent to Land Registry.
3. The land registry map data is returned, imported, prepared and placed on your maps.

This service is for both new and existing maps.

Price

- » £2.50 per title (minimum order of £80)

All prices are excluding VAT.
